

The EE14 is a humidistat featuring the stable series HC moisture sensors, this will ensure a long term stability, a low hysteresis and a high chemical resistance.

The shift point can be set anywhere in the range of 10-95% RH, while at the same time an independent hysteresis can be set in the range from 3% up till 15%RH. The EE14 is available in two models, one as wall-mount and one as tunnel-mount. By applying the correct sensor-cap, a maintenance free operation will be guaranteed in heavily polluted areas, in addition to extreme moisture environments.

Typical applications for the EE14 are swimming pools, cold storage, climate and air vents.

Universal power-supply of 24VAC or DC with only 20mA .

As an output the EE14 has a floating changeover contact.
